## Introduction

The objective of this study is to determine which 100 or 200 level courses have the most connection with separating degree earning from non-degree earning students on the basis of failing the course. In effect, this is an effort to determine which North Dakota University System courses act as "gatekeeper" courses - courses that, if failed, are associated with failure to complete a Bachelor or Associate degree. While certainly no course is positively associated with degree completion by failing to earn credit in it, this study attempts to identify those courses that have the strongest estimated negative effect on degree earning.

## Methodology

## Course Selection

Courses were selected for further examination if they were a 100 or 200 level course and had a total enrollment count for the years 2010-2018 in the top 100 of all 100/200 level NDUS courses.

## Student Matching Procedure

Students who pass a course cannot directly be compared to students who do not pass the same course in regards to degree completion rate. This is due to the underlying differences in academic ability - students performing at a high academic level are naturally more likely to pass a course, and thus graduate. To then compare the effect of passing or failing any given course, students must have a very similar academic background.

For example, the differences between students in this study who were enrolled in CSCI 101: Introduction to Computers is shown below. This illustrates the difficulty in directly comparing degree earning rates between the groups, as it is impossible to ascertain whether the difference is caused by the act of failing the course, or some other underlying academic difference.

|  |  | High School Averages |  |  |  |  |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Student Group | n | ACT Composite | Free/Reduced Lunch | IEP | GPA | NDUS Degree Earned Rate |
| Did Not Pass CSCI 101 | 1400 | 19.4 | $20.0 \%$ | $6.1 \%$ | 2.72 | $\mathbf{2 4 . 1 \%}$ |
| Passed CSCI 101 | 6408 | 21.1 | $15.2 \%$ | $4.0 \%$ | 3.21 | $\mathbf{7 0 . 6 \%}$ |

Table 1: CSCI 101 Group Differences Before Matching

## For each of the 100 courses selected, the following procedure was followed:

Enrollment information for the course in the years Fall 2009 - Spring 2013 was collected, at which point students enrolled in the course were split into two groups - those who earned credit in the course, and those that did not (this also includes students whose grade was recorded as a W). To create a matched group of students earning credits to those not earning credits, high school information was used, thereby restricting this study to only North Dakota high school students.

To create groups of students with similar academic background, students were matched one-to-one (a passing student with a failing student) using propensity score matching on the following high school variables:

- ACT Composite Score
- High School GPA
- Free/Reduced Lunch Status
- IEP Status

If a student did not have the data indicated, they were removed from the study and were not matched. After the completion of the student matching process, two groups of similar matched students existed: one group that passed the course and a second group who did not pass the course. For example, here are the differences in the two group of CSCI 101 students following matching. As the following table demonstrates, the differences between the groups are much lower, making estimating the effect of the course failure more valid.

|  |  | High School Averages |  |  |  |  |
| ---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Student Group | n | ACT Composite | Free/Reduced Lunch | IEP | GPA | NDUS Degree Earned Rate |
| Did Not Pass CSCI 101 | 1296 | 19.6 | $18.8 \%$ | $5.1 \%$ | 2.79 | $\mathbf{2 6 . 0 \%}$ |
| Passed CSCI 101 | 1296 | 19.6 | $18.9 \%$ | $4.9 \%$ | 2.80 | $\mathbf{6 0 . 9 \%}$ |

Table 2: CSCI 101 Group Differences After Matching

## Estimating Course Failure Effect

To estimate the effect of failing any given course, each pair of students were split into one of four categories based on whether or not they eventually went on to complete a Bachelor or Associate degree within the North Dakota University System.

| Results for Each Pair Of Students |  |  |
| ---: | ---: | ---: |
| Student Who Passed Course | Student Who Did Not Pass Course | Count |
| Earned Degree | Earned Degree | 224 |
| Earned Degree | Did Not Earn Degree | 557 |
| Did Not Earn Degree | Earned Degree | 112 |
| Did Not Earn Degree | Did Not Earn Degree | 403 |

Table 3: Results of Student Pairs in CSCI 101
Following the compilation of these results, McNemar's test was conducted for each course to determine the confidence interval for the effect of failing the course, using a family-wise error rate of $5 \%$ with a Bonferroni correction. For example, for CSCI 101, the estimated difference of degree attainment rates for similar students who fail the course versus those passing the course falls between $-40.1 \%$ and $-28.6 \%$.

## Results

Of the 100 courses that were tested, 39 courses showed that failing the course had an estimated difference in degree attainment rates for similar students greater than $-20 \%$. Those 39 courses are shown on the following pages, along with the ranges of the effect estimate and a tabular summary of the information. The courses are sorted by the upper bound of the estimate.

## Graphical Summary of Results

Tabular Summary of Results

|  |  |  | Degree Earned By __S Student(s) |  | Effect of Failing Course |  |  |  |
| ---: | ---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Course Description | Course Num. | n Pairs | Both | Passing | Failing | Neither | Lower Bound | Upper Bound |
| Introduction To Computers | CSCI 101 | 1296 | 224 | 557 | 112 | 403 | $-40.1 \%$ | $-28.6 \%$ |
| Principles of Microeconomics | ECON 201 | 1565 | 349 | 674 | 154 | 388 | $-38.6 \%$ | $-27.8 \%$ |
